How to Check the Volume on the Computer

We try and keep the volume as clear and high as possible when filming classes in the studio. There might be times when the computer you are using is set to a low volume.

1. On the bottom right of your computer toolbar, there should be a speaker icon, if you are not able to see it, try clicking the upward carrot (^) to see if it is in the box of icons.
2. Click on the speaker icon and a volume slider should pop up.
3. If the slide is low, try slowly sliding the bar to the right.
4. If this does not work, try seeing if there are different speaker options. Sometimes if there is another speaker available, it connects to the other one and might not be the one you want to be using.
